# Dynamic Positioning and Visual Field AGENDA

- 1. Agenda
- 2. Presenter Introductions
- 3. Dynamic Positioning and Visual Field

Standard Set-up, Video Visual Feed and Video Proximal Interpreting

- 4. Walk-around, Hands-on and Break
- 5. Small Group Exercise
- 6. TBD; several options depending on circumstances
- 7. Questions and Hands-On

# **Dynamic Positioning & Visual Field**

is a singular concept that regards the physical positioning and visual fields of deaf and deafblind consumers and interpreters as high-priority and adaptable elements in the interpreting process.

Stephen Frank, 2016

## **Dynamic Positioning & Visual Field**

is important because by highly prioritizing and adapting positioning and visual field, deaf and deafblind consumers and interpreters readily receive visual information that is essential for understanding the intent of the speaker.

Stephen Frank, 2016

#### Standard Set-up Mainstream Group Setting

#### Features

- front corner designated seating
- interpreter facing opposite direction and back to sources of information
- unoccupied seats nearby
- deaf and deafblind consumers backs to hearing consumers

Clear View Innovations 2016 © All Rights Reserved

Standard Set-up Seating

## "Peer Sphere"

# Only two out of five seats have hearing consumers

Clear View Innovations 2016 © All Rights Reserved

#### Standard Set-up Challenges for Consumers

- removed seating; minimal awareness of and interaction with other consumers
- Visual Split-Attention
- variable need to reinterpret translations and transliterations into understandable versions

#### **Challenges for Interpreters**

- little to no control over seating, sound, lighting, background
- interpreter rarely has real-time access to speaker's nonverbal cues and visual aids
- interpreting messages they do not understand

Clear View Innovations 2016 © All Rights Reserved

## Video Visual Feed

#### Features

- interpreter uses tablet computer with camera, software, display and mount
- interpreter correctly views speaker and visual aids on the tablet display in real time and sees the consumers and sources of information, on the display, in one visual field

Text in images is simulated

Clear View Innovations 2016 © All Rights Reserved

## Video Visual Feed

#### **Benefits**

- more control over seating thus more options for positioning and and visual field
- interpreter has real-time views of speaker's nonverbal cues and visual aids
- visual information helps interpreter comprehend intent

#### **Costs and Challenges**

- equipment; tablet and stand
- training
- pre-assignment logistics
- time for set-up

## Value of Visual Information

Panayotis Mouzourakis is a Greek-English Interpreter in the European Parliament and has written several articles on Video Remote Interpreting for spoken languages.

"You need to visually follow the PowerPoint presentation. It has been estimated that as much as 40 percent of the information contained in a speech is conveyed by nonverbal cues.

Vincent BUCK. "An interview with Panayotis Mouzourakis". *aiic.net.* March 23, 2000. Accessed September 30, 2016. <u>http://aiic.net/p/121</u>. Clear View Innovations 2016 © All Rights Reserved According to **Dennis Cokely** there are seven major stages of cognitive processing with regards to Minimizing Miscues. In Stage 1, Message Reception, he states:

"Interpreter must be **able** to perceive the message. If unable to perceive, the rest of the process cannot succeed." "Message reception occurs through visual perception/reception or auditory perception/reception."

Anything that prohibits the ability to perceive/ receive the message (poor eye sight, distance, noise, loss of hearing) will impact on the accuracy of message reception."

*The Cokely Model,* Dennis Cokely, Interpretation: A Sociolinguistic Model of the Interpretation Process, Burtonsville, MD: Linstok Press, 1992.

Gesture carries purpose and meaning. It can:

- add emphasis and information to spoken language
- add a level of emotionality to a point
- show transition in topic or organized thoughts

 require less time to express a mood, attitude, or idea as compared to language

Paraphrased from slides of Dr. Adan R. Penilla, II Colorado State U. Adjunct Professor, 2013 RID National Conference aslworldmatters.com

## Video Proximal Interpreting Features

Deaf and deafblind consumers and interpreters settle themselves in separate locations of their choosing in the same room -- facing forward.

The interpreters face forward and in separate locations of their choosing

- camera, display and mount
- video software and link
- blending and deaf gain

#### This new set-up gives:

- consumers and interpreters choice
- gives deaf and hearing consumers a chance to adjoin
- interpreters a chance to normalize

Clear View Innovations 2016 © All Rights Reserved

## Video Proximal Interpreting

- Two deaf consumers
- One hearing speaker and three attendees
- Interpreter sits behind the deaf consumers
- Interprets to a laptop camera that connects to a tablet standing on a tripod

### Video Proximal Interpreting

#### **Benefits**

- choice of location & seating
- single forward visual field
- incidental interaction & learning
- appropriate distances
- normalization\* and blending

#### **Costs and Challenges**

- pre-assignment time
- equipment and connectivity
- training and on-site logistics
- equipment and connectivity

\* conforming with a standard; <u>become familiar</u> and understood
